

1. Make sure that **all of yours MetaTrader 4 terminals are currently running.**
2. **Run StartupAdder.exe.** That program is located in the C:\ root directory.
It will auto-generate startup.cmd file with the paths to MT4 terminals that are currently running.

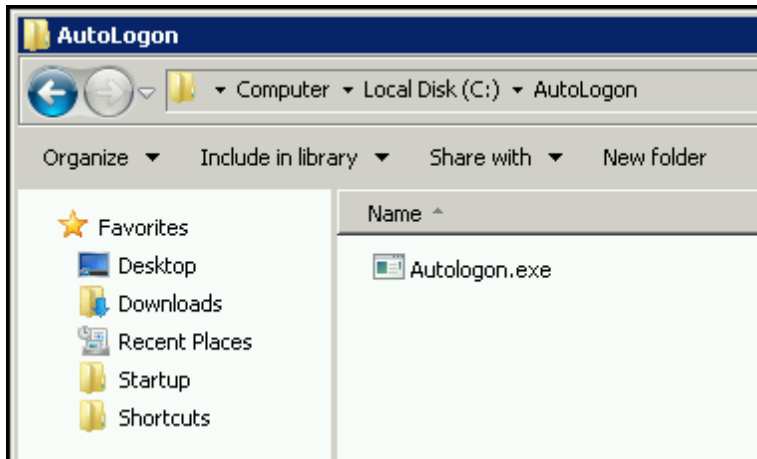

3. Make sure that startup.cmd is valid (check if there are paths to MT4s).

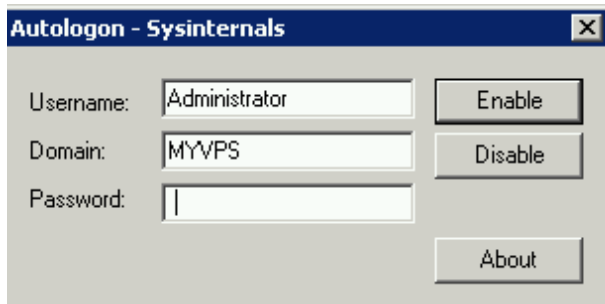

4. Now **make shortcut to startup.cmd inside the Startup folder**. You can find this folder @ Favorites. Just copy the startup.cmd file from C:\ root directory, go to Startup folder, left click inside it and choose 'Paste Shortcut'.

5. **Run AutoLogon.exe** program that is located in the C:\AutoLogon\ directory.

6. **Put your VPS password into AutoLogon.**

7. That's all!

You can now test your startup setup by restarting the VPS.

It should automatically startup all of your MetaTrader 4 terminals.
